Art Unit: 2675

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art in view of Miyashita et al. (6,115,084).

The admitted prior art discloses an LCD driving circuit for driving an LCD to display a video image, comprising: a analog gamma-correction circuit; inversion circuit; an LCD timing control circuit; a PWM; a shutdown circuit; a display memory; and filtering circuit.

The admitted prior art differed from the claims in that the admitted prior art does not disclose the use of a digital gamma correction circuit.

Miyashita, in the same field, discloses a digital gamma correction circuit (col. 1, lines 49-54).

Therefore, it would have been obvious to one of ordinary skill in the art to substitute Miyashita's digital gamma correction circuit for the analog gamma correction circuit of the admitted prior art because Miyashita teaches the digital gamma correction circuit cost less than the analog gamma correction circuit (col. 1, lines 55-60).

Art Unit: 2675

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

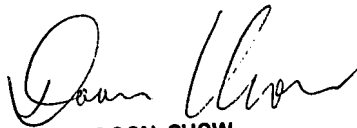

Dingwall and Asari et al. teach the use of a digital gamma correction circuit.
